

Point of Sale

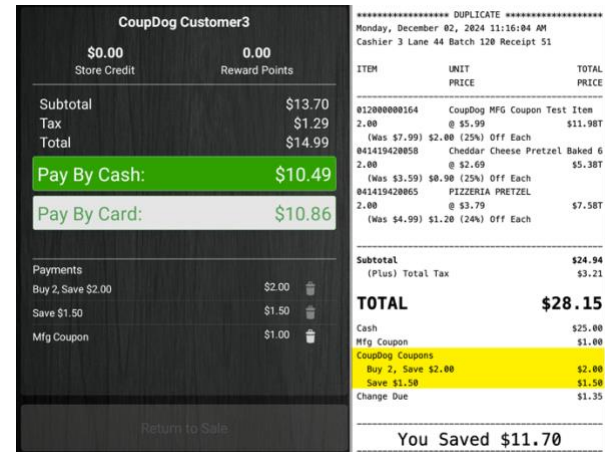

Release Update v1.11.246 – December 3, 2024

New + Improved

CoupDog (For INFRA Members Only)

We're happy to announce that we've integrated with CoupDog to be able to process mfg coupons (not CoupDog Store Coupons, yet). Mfg coupons offered through CoupDog will automatically get added to the payment screen, when a CoupDog customer is added to the transaction and/or coupons are scanned on the sales screen. To turn on CoupDog, you'll need to enter CoupDog credentials in your OrderDog online account on the Store Settings page. It's important to note that more than one digital coupon provider (CoupDog or SaveNaturally) CANNOT be used at the same time. Below are some things to note regarding CoupDog:

- CoupDog coupons will automatically be added to the payments screen, which cannot be manually removed once applied
- Must have either a CoupDog customer added to the transaction or a CoupDog coupon is scanned on the sales screen to get the coupons applied
- The sales receipt will also show when CoupDog payments are applied, and they will also be added to the "You Saved" total
- CoupDog coupons cannot be voided or returned

Changes to Close Batch & Z-report

We wanted to create more visibility into when a digital coupon payment was applied (from SaveNaturally or CoupDog) versus when a non-digital mfg coupon payment is made. Below are samples of the changes:
