

Point of Sale

Release Update v1.11.265 – February 10, 2025

New + Improved

Internet Connection

We're happy to announce that we've increased visibility and made it incredibly easier to see when the point-of-sale is connected to the internet or is offline. The white icon will display when there is a good internet connection, and the icon will immediately turn to a red alert when there is no connection.

Sync CoupDog Customers

We've now made it possible for CoupDog customers to automatically sync to OrderDog. This occurs when a customer enters a phone number that doesn't exist in OrderDog but does exist in CoupDog. If the phone number is not found, then this means the customer doesn't exist in OrderDog or CoupDog, and a new customer record needs to be created.
