

Point of Sale

Release Update v1.11.295 – March 19, 2025

New + Improved

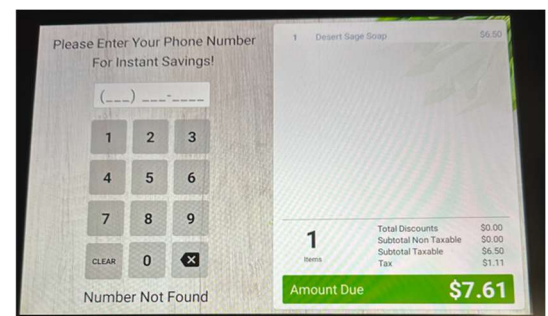

Change Due Screen

We're happy to announce that we've revised the change due screen on both the Customer Facing Display and Point-of-Sale. The revised change due screen provides more visibility for both your employees and your customers. They can now see all the various payment methods that were applied to the transaction. And the various payment methods were also grouped in a way to make it quicker and easier for everyone to understand.

Entering Phone on Customer Facing Display

We've taken the opportunity to create an even quicker and easier user experience for your customers when entering their phone numbers on the customer facing display. Now your customers will automatically be presented with the keypad to enter a phone number. And the moment the phone number is entered, the point-of-sale will automatically search to find the customer. If the number is not found, both the customer and the cashier will be alerted, so the cashier can quickly add a new customer record. By reducing the number of steps your customers take to apply themselves to transactions, should elevate your customer's experience.

EBT SNAP Compliant

We are SNAP compliant by making the following changes when an EBT payment is applied to the transaction:

- The customer's name will be masked by showing the customer id instead
- The EBT balance will display (available only for Precision Payments)
