## Release Update v4.31.85– March 18, 2026

### New + Improved

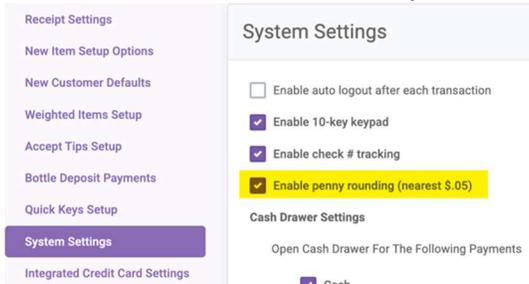

---

#### Updated – Various Places to Support Penny Rounding

We’re excited to announce that we’re introducing the ability for you to choose if you want to continue using pennies or discontinue them. When discontinuing the use of pennies, the exchange of cash will be automatically rounding to the nearest 0 or 5 to avoid the use of pennies. Whenever cash rounding is applied, the rounded amount will be made visible. In addition to changes made on the point-of-sale, the following changes were made to your online account to support the decision to discontinue using pennies.

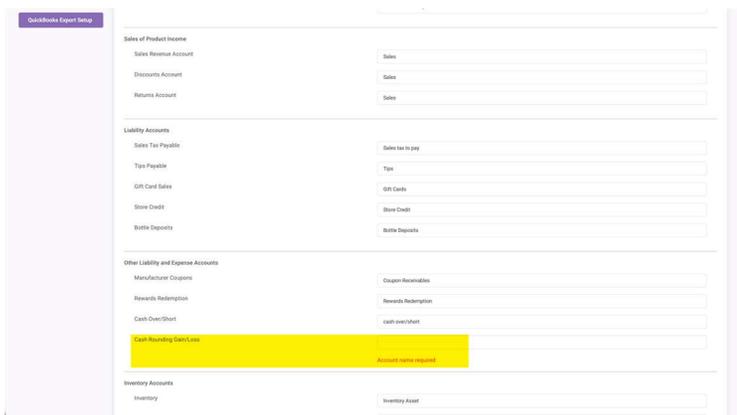

#### Point of Sale Settings Page (System Settings Section)

- The “Enable penny rounding (nearest \$.05)”
- The setting is defaulted to be disabled
- When enabled, it must be synced to the point-of-sale

#### Store Settings Page (QuickBooks Export Setup Section)

- “Cash Rounding Gain/Loss” QB Account was added for user to enter an account name
- The account name is required when the penny rounding setting is enabled

## Store Sales Closeout Report

- Added new row to create visibility around the total penny rounded amounts
- Everything else in the report remains the same

State Tax Collected	\$12.80	\$12.80
Total Tax Collected	\$41.78	\$41.78
Cash Rounding Adjustment	-\$0.19	-\$0.19
Total Tips Collected	\$0.00	\$0.00
Liabilities Sales		

## QuickBooks Export Report

- Added new row to reflect the total penny rounded amounts
- Debit = - Penny Rounded Amount
- Credit = + Penny Rounded Amount
- The cash rounded row won't display if the total cash rounded amount is 0

Sales Activity	Debit	Credit
Sales Summary		
Sales Revenue		\$562.38
Discounts	\$10.54	
Returns	\$63.75	
Sales Tax Payable		\$41.78
Cash Rounding Gain/Loss	\$0.19	
Liability Sales		
Bottle Deposit		\$0.05

## Updated – Store Settings Page with Notifications for 3<sup>rd</sup> Party Integrations

When integrating with a 3<sup>rd</sup> party to share your data, you'll now see a notification that the integration requires sharing data. The following types of integration will display this notification:

- Ecommerce (Shopify or WooCommerce)
- Digital Coupons (SaveNaturally)
- SPINS

If you have an existing integration, but do not want to share your data, then please disable the integration on your Store Settings Page. Below is an example of the SaveNaturally integration notification:

Integrated Coupon Settings

Digital Coupon Processor

SaveNaturally

**SaveNaturally Account Credentials**

Store ID

Store Password

test

**SaveNaturally Integration**

Enabling this integration allows OrderDog to send limited transaction data to SaveNaturally to support digital coupons. This includes basket information and customer phone number.

Data shared comes from your store's transactions.

OrderDog does not control SaveNaturally's services or data practices. SaveNaturally may update its services, terms, or data practices over time.

[OrderDog Terms of Service](#)

[OrderDog Privacy Policy](#)

I authorize OrderDog to transmit transaction and customer data to SaveNaturally to enable this integration

This report has been updated with the following changes:

- Customer filter improved to make it easier to lookup a customer
- Can now use the # Sales clickthrough to see the receipts for that customer

### Updated – Store Credit Balance Summary Report

This report has been updated with the following changes:

- Customer filter improved to make it easier to lookup a customer
- Report has been renamed to: Store Credit Balance Summary
- Report now displays only in the Customer Reports Section

### Updated – Rewards History Report

This report has been updated with the following changes:

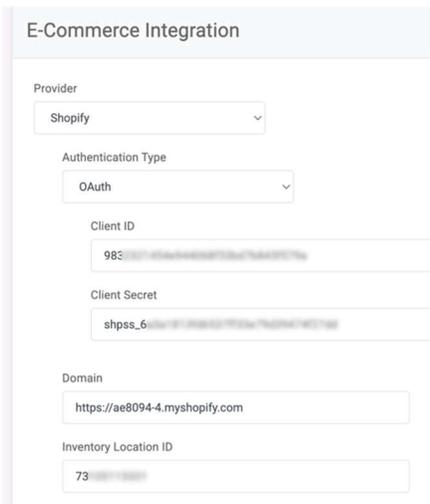

- Customer filter improved to make it easier to lookup a customer

### Updated – Store Settings Page with New Shopify Integration Settings

Shopify made a change on their side that forced us to create a new way to establish a connection with them. This only impacts those that don't currently have an integration setup with Shopify but would like to. The integration with Shopify currently only syncs on-hand quantities. The adding and maintaining of items, prices, etc must be independently managed in Shopify, since the integration only supports updating the on-hand quantities. Below are settings needed for creating a new Shopify connection:

- Authentication Type: OAuth (this type must be chosen)
- Client ID
- Client Secret
- Domain
- Inventory Location ID

If you're wanting to integrate with Shopify, contact our support team to get the OrderDog Shopify Integration guide. Please note that the integration is limited to only syncing the on-hand quantities between both systems. You'll need add and maintain items, prices, etc in Shopify yourself.

The screenshot shows a form titled "E-Commerce Integration" with the following fields:

- Provider:** A dropdown menu with "Shopify" selected.
- Authentication Type:** A dropdown menu with "OAuth" selected.
- Client ID:** A text input field containing "98c...".
- Client Secret:** A text input field containing "shps\_s\_6...".
- Domain:** A text input field containing "https://ae8094-4.myshopify.com".
- Inventory Location ID:** A text input field containing "73...".
