Release Update v1.19.5 – August 13, 2024

New + Improved

Multiple Item Discounts

We're really excited to release out the ability to create multiple discounts for a single item. This is a fantastic way of being able to create future discounts without impacting current discounts.   Some of the neat things are:
- Add as many discounts as you need
- All are editable
- If more than one discount is active at the same time, then the best discount will be applied to the item on the point-of-sale and shelf tag page
- "Target" icon represents an Exact Sales price discount
- "Rounding" icon represents discount where nearest rounding was applied
- Expired discounts will automatically fall off the list

Managed Items are Editable

We are sure you'll be excited to be able edit items managed by OrderDog. Our feeling is we'll provide suggestions, but you have 100% control to edit the following fields for any item (including managed items):

- Any upc
- Brand
- Description
- Item Size
- Form
- Department
