Release Update v1.19.9 – October 21, 2024

New + Improved

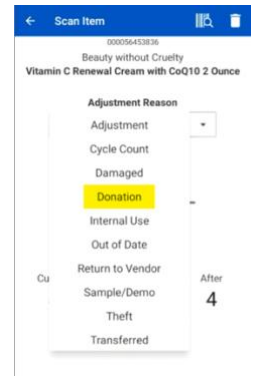

Orders – Item’s Sales History

We’re excited to release out the ability to see the sales history for any item while creating an order. When an item is scanned, an option called “SALES” will display. Selecting this option will display the total quantity sold for each month, beginning with the current month. The sales history section is scrollable, thus allowing you the ability to see into the past for several months

Inventory Adjustment – New Reason

While performing an inventory adjustment on an item, you’ll now see “Donation” listed as one of the adjustment reasons.

Submit Receiving Document Prompt

We’ve recognized that there are times when receiving in an order an employee will accidentally submit what was received before fully reviewing it. To avoid submitting received documents too prematurely, a message will automatically popup asking if you’re sure you want to send it.
